

1 FALCOFLATLINE

The FalcoFlatline is a square section alternative to the rounded Sheffield stand. It can be used both as a cycle stand or as a barrier fence for pavements and demarcation.

The barrier is manufactured from steel box profile 80x20mm. Approximately 660mm from the top there is an additional strip to give the frame more solidity and 'body'.

The stand is designed to be mounted 900mm above ground level. The width is 750 mm. There are two options with either a root for below ground fix or alternatively a bolt down option with welded base plates 200x100mm with 2 mounting holes. The FalcoFlatline is also available as fixed bollard/post (page 121).

2 FALCOFAIR

A further variation to the cycle stand/leaning bracket is the curvy FalcoFair with its Greek 'pi' shape. Very much a design led option, the FalcoFair has bags of flair!

The stand is manufactured from 3 symmetrical robust steel sections welded in a curved profile. The leaning bracket is 1,024mm wide and 900mm high ground level. It is a fine and solid design thanks to the use of 40mm profile tube.

The FalcoFair is available with 2 welded base plates of diameter Ø110mm.

All Falco steelwork is hot dip galvanised to BS EN ISO 1461 and can additionally be powder coated in any of the 192 RAL colours.

1 FALCOFLATLINE	
Part code	Without cross strut
02.125.020	width 750mm, total height 1100mm for below ground fix
02.125.700	additional charge for powdercoating in RAL
02.125.212	width 750mm, height 900mm with base plates 200x100mm
02.125.712	additional charge for powdercoating in RAL
2 FALCOFAIR	
Part code	Description
02.015.010	width 1024 mm, height 900mm with base plates round 100mm
02.015.700	additional charge for powdercoating in RAL
